

SPECIFICATION AMENDMENT

Applicant respectfully requests that the Examiner accepts the enclosed substitute specification enclosed herewith. The substitute specification conforms more closely to the preferred layout and line spacing (i.e., double spaced lines) as suggested by the Examiner. Additionally, the substitute specification includes several typographical and grammatical corrections. No substantive or material changes, whether additions or deletions, have been made to the specification.

The substitute specification is marked up to show changes made relative to the immediate prior version, as set out in 37 CFR § 1.121(b). The changes are shown by strikethrough (for deleted matter) and underlining (for added matter). However, for clarity, the drawings, which have been removed from the specification (as discussed below), are omitted from the substitute specification. The removed drawings are not shown by strikethrough.

A clean copy of the substitute specification (i.e., a copy of the substitute specification without strikethroughs and underlining, but with a header labeled SUBSTITUTE SPECIFICATION – CLEAN COPY) is enclosed to facilitate the Examiner's review and expedite prosecution of this application. The Examiner is invited to request an electronic copy from Applicant's attorney.

REPLACEMENT DRAWINGS

Applicant respectfully requests that the Examiner accept the enclosed black & white replacement drawings, labeled FIG. 1- FIG. 18, which include desired changes, without markings, and which comply with 37 CFR § 1.84. The only changes made to the drawings are that they have been removed from the body of the specification, figure numbers (i.e., FIG. 17A-17L) have been inserted for each page of the source code listing, and the titles of figures have

been removed from the drawing pages and inserted into the amended specification in the section entitled *Brief Description of the Drawings*. No substantive changes have been made to the replacement drawings.
